EC DECLARATION OF CONFORMITY 02/EU/CTX/2020

Series:

CTX...

Manufactured by:

Tapflo AB

Filaregatan 4

442 34 Kungälv, Sweden

This declaration of conformity is issued under the sole responsibility of the manufacturer.

Object of declaration: **SINGLE STAGE CENTRIFUGAL PUMPS**

The object of the declaration described above is in conformity with the relevant Union harmonization legislation:

- Directive 2006/42/EC of European Parliament and of the Council of 17 May 2006 on machinery, amending Directive 95/16/EC;
- Directive 2014/35/UE of the European Parliament and of the Council of 14 February 2014 on harmonization of the laws of Member States relating to electrical equipment designed for use within certain voltage limits;

Mr Michał Śmigiel is authorized to compile the technical file.

Tapflo Sp. z o.o.

0. GENERAL

0. GENERAL

0.1. Introduction

The CTX pumps are open impeller single stage centrifugal pumps. They are manufactured in high finish and mechanical strong material stainless steel AISI 304/316L. The pump range meets the demands from a variety of today's industries.

The industrial series CTX I is designed with sand blasted pump casing. A variety of connection types, mechanical seal options and other executions are available to satisfy most type of industrial duties.

The hygienic series CTX H is supplied with electro polished internals. This series is specially dedicated for hygienic duties in food, beverage and pharmaceutical industries, where clean- and drain-ability are important factors.

With proper attention to maintenance, CTX pumps will give efficient and trouble free operation. This instruction manual will familiarise operators with detailed information about installing, operating and maintaining the pump.

0.2. Warning symbols

The following warning symbols are present in this instruction manual. This is what they say:

This symbol stands next to all safety instructions in this instruction manual where danger to life and limb may occur. Observe these instructions and proceed with utmost caution in these situations. Inform also other users of all safety instructions. In addition to the instructions in this instruction manual, the general safety and accident prevention regulations must be observed.

This signal stands at points in this instruction manual of particular importance for compliance with regulations and directives, for correct work flow and for the prevention of damage to and destruction of the pump.

This symbol signals possible danger caused by the presence of electric fields or live wires.

0.3. Qualification and training of personnel

The personnel in charge of installation, operation and maintenance of the pumps we produce must be qualified to carry out the operations described in this manual. Tapflo shall not be held responsible for the training level of personnel and for the fact that they are not fully aware of the contents of this manual.

1. INSTALLATION

1. INSTALLATION

1.1. Operation principle

In order to operate the pump, the casing has to be filled with liquid before start-up. The liquid enters the pump casing axially to the shaft. The rotating impeller generates a centrifugal force accelerating the liquid through the pump casing and into the discharge piping.

1.2. Receiving inspection

Although precaution is taken by us when packing and shipping, we urge you to carefully check the shipment on receipt. Make sure that all parts and accessories listed on the packing list are accounted for. Immediately report any damage or shortage to the transport company and to us.

1.3. Lifting and transportation

Before handling the pump check the weight of the pump (see chapter 6. Data). Refer to Your local standards on how to handle the pump. If the weight is excessive to transport by hand it must be lifted using slings and a suitable lifting device e.g. a crane or forklift.

Always use at least two slings and make sure they are secured in such a way to prevent the pump from slipping and that the pump unit is hanging straight.

Never lift the pump with only one sling. Incorrect lifting can cause serious injury and/or damage to the pump.

Never lift the pump under pressure.

Be careful that nobody passes under the pump when lifted.

Never try to lift the pump by the connections or hoses attached to the pump.

1. INSTALLATION

1.4. Storage

If the equipment is to be stored prior to installation, place it in a clean location. Do not remove the protective covers from the suction and discharge which have been fastened to keep pump internals free of debris. Clean the pump thoroughly before installation.

When in storage, turn the shaft by hand at least once per month. The pump-motor unit should always be stored indoor in dry, vibration and dust free conditions.

1.5. Foundation

The pump-motor unit must stand on and be fixed to a sufficiently rigid structure that can support the entire perimeter on which the unit stands. The foundation on a firm bottom is the most satisfactory. Once the pump is in position, adjust level with metal shims between the feet and the surface on which it stands. Check that the feet of the pump motor unit stand well on each of them. The surface on which the foundation stands must be flat and horizontal. If the unit is fitted on a steel structure, make sure that it is supported so that the feet do not warp. In any case, it is advisable to fit some anti-vibration rubber pieces between the pump and the brickwork. The motor needs an additional stand as its level is higher than that of the pump casing. As an option the pump can be ordered with feet for the motor. For close-coupled type, pump motor alignment is not required.

1.6. Environment

- There should be enough space in the vicinity of the pump in order to operate, maintain and repair it.
- The area in which the pump is operated, must be sufficiently ventilated. Excessive temperature, humidity or dirt may affect the pump operation.
- Behind the cooling fan of the motor there must be sufficient room for the hot air to escape the motor.

1.7. Suction and discharge piping

A pump is generally part of a piping system that can include a number of components such as valves, fittings, filters, expansion joints, instruments, etc. The way the piping is arranged and the positioning of the components has a great influence on the operation and the lifetime of the pump. The pump cannot be used as a support for the components connected to it.

The flow of liquid from the pump must be as even as possible. It is advisable to avoid any tight bends or drastic reductions of diameters that may cause flow resistance in the installation. In case of diameter reduction, it is advisable to use appropriate conical reductions (possibly eccentric on suction side and concentric on discharge side) at changes of diameter and at a minimum distance from pump connections of five diameters of the pipeline.

1.7.1. Connection of discharge pipe

A check-valve and a shut-off/regulation valve are normally fitted on the discharge side.

The check-valve protects the pump from any backflow. The shut-off/regulation valve cuts off the pump from the line and adjusts the output. Never adjust flow rate using the valve on the suction pipe.

1. INSTALLATION

1.7.2. Connection of suction pipe

The suction piping is very important for the correct operation of the pump assembly. It must be as short and as direct as possible. If a longer suction line is unavoidable, the diameter should be large enough, i.e. at least as the inlet connection on the pump, to ensure less flow resistance. In any case, suction must be carried out properly avoiding any air locks.

The CTX pumps are single-stage centrifugal pumps, thus not self-priming. It will therefore always be necessary to install a bottom valve in all cases when the static height of the liquid is lower than the suction height of the pump. It is also crucial that the whole suction line is filled with liquid prior to starting the pump. The suction piping must be air tight. Critical points in these terms are also the seals between flanges and the seals of the valve stems. Even some small air let into the suction line cause serious operating problems that can make the pump stop. It is recommended to use check-valve in the suction line to avoid siphoning when the pump stops.

1.8. Health and safety

The pump must be installed according to local and national safety rules.

The pumps are constructed for particular applications. Do not use the pump on applications different from that for which it was sold without consulting us to ascertain its suitability.

1.8.1. Protection

In the interest of health and safety it is essential to wear protective clothing and safety goggles when operating, and/or working in the vicinity of Tapflo pumps.

1. INSTALLATION

1.8.2. Electrical safety

Do not carry out any maintenance or/and operation on the pump while it is running or before it has been disconnected from the power supply. Avoid any danger caused by electric power (for details see current regulations in force). Check that electrical specifications on the data plate are equivalent to the power supply to which it will be connected.

1.8.3. Chemical hazard

Whenever the pump is to be used for pumping a different liquid, it is essential to clean the pump beforehand in order to avoid any possible reaction between the two products.

1.8.4. Dry running

Do not start nor carry out running tests before filling the pump with liquid. Always avoid dry operation of the pump. Start the pump when it is completely filled and with the valve on the discharge side almost completely closed.

1.8.5. Explosion hazardous environments – ATEX

CTX series pumps are allowed to operate in environments, where is danger of explosion. However, they must be equipped with appropriate ATEX rated electrical motor. Follow below instructions and local/national rules for safe use.

ATEX (directive 2014/34/EU) classification of Tapflo CTX pumps:

II 2G Ex h IIC T6...T3 Gb

II 2D Ex h IIIC T78°C...T148°C Db

Equipment group: **II** – all other explosive areas than mines;

Category group: **2** – high level of protection (can be used in zone 1);

Atmosphere: **G** – gas;

D – dust;

Explosion group: **IIC** – gas group (such as acetylene, hydrogen);

IIIC – dust group (conductive dusts);

Type of protection: **h** – control of ignition sources; constructional safety “c”

Temperature class: **T3, T6** – in the event of a malfunction, the maximum temperature of a surface that may be exposed to gas **T3** = 155°C, **T6** = 85°C;

EPL protection level: **Gb, Db** – high protection

Temperature classes and allowable temperatures

The temperature class of the pump depends on the temperature of the pumped medium.

Medium temperature	Pump max surface temperature
	$-20^{\circ}\text{C} \leq T_a \leq +40^{\circ}\text{C}$
Up to 40°C	T6 / 78°C
Up to 60°C	T4 / 98°C
Up to 80°C	T4 / 118°C
Up to 110°C	T3 / 148°C

If ambient temperature exceeds the range $-20^{\circ}\text{C} \leq T_a \leq +40^{\circ}\text{C}$, contact Tapflo.

1. INSTALLATION

Antistatic surface

Pumps in ATEX execution should be cleaned in order to preserve antistatic properties. Layer of dust or other solid particles on the outer surfaces is unacceptable.

Double mechanical seal flushing

Pumps with double mechanical seal must not be put into operation in Ex-zone without seal flushing system connected. For installation details check 4.2 "Double mechanical seal -2D")

1.8.6. Noise level

CTX pumps, including the motor, in normal operating conditions produce a sound level below 80 dB(A). The major sources of noise are: liquid turbulence in the installation, cavitation or any other abnormal operation that is independent from the pump construction nor the pump manufacturer. The user must provide suitable protective means if the sources of noise could produce a harmful noise level for operators and for the environment (in compliance with current local regulations).

1.8.7. Temperature hazards

Raised temperature can cause damage on the pump and/or piping and may also be hazardous for personnel in the vicinity of the pump/piping. The hot or cold parts of the machine must be protected to avoid accidental contacts.

1.8.8. Rotating parts

Do not tamper with the protection of the rotating parts, do not touch or approach rotating parts in movement.

1.8.9. Cleaning and disinfection

Cleaning and disinfection of the pump system is of greatest importance when the pump is used in a food process installation. Use of a pump system that is NOT cleaned or disinfected can cause contamination of the product.

1. INSTALLATION

1.9. Example of installation

- 1) YES: Gate valve (may also be near pump in case of long piping)
- 2) With positive head: tilt of piping towards pump
- 3) YES: line strainer if particles are present
- 4) NO: air pockets – the circuit must be short and straight
- 5) YES: pipe fastening
- 6) Suction line as short and direct as possible
- 7) YES: attachment for gauge or safety pressure switch
- 8) YES: adjusting gate valve on outlet
- 9) Bends placed after valves and instruments not closer to the pump inlet than five times the piping diameter
- 10) YES: attachment for gauge or safety pressure switch
- 11) NO: elbow joints (and other parts) on the pump (discharge and suction lines)
- 12) With negative suction lift: tilt of piping towards suction tank
- 13) YES: check valve (with negative suction lift)
- 14) YES: strainer if particles are present
- 15) Suction head varies according to flow in order to prevent windage
- 16) Suction head
- 17) Immersion depth
- 18) YES: expansion joint (indispensable with long pipes or hot liquids) and/or anti-vibration facility during discharge and suction; anchored near to pump
- 19) YES: overcoming obstacles at lower depths
- 20) Fix the pump by the fixing holes provided: the supports must be level
- 21) YES: drainage channel around base

1.10. Instruments

In order to ensure a proper control of the performance and the conditions of the installed pump, we recommend using the following instruments:

- a pressure-vacuum gauge on the suction piping;
- a pressure gauge on the discharge piping.

1. INSTALLATION

The pressure intakes must be made of straight pieces of piping at a distance of minimum five diameters from the pump inlets. The pressure gauge on discharge must always be fitted between the pump and the shut-off / regulation valve. The output can be read on the pressure gauge, transformed into meters and then compared with the typical curves.

1.10.1. Electric power

The electric power absorbed by the motor can be measured by means of a wattmeter or an amp gauge.

1.10.2. Optional instruments

The optional instruments can indicate if pump is working in an abnormal way. The abnormal conditions can be caused by: accidentally closed valves, lack of pumped liquid, overloads, etc.

1.10.3. Thermometer

If the temperature of the pumped liquid is a critical parameter, provide the installation with a thermometer (preferably on the suction side).

1.11. Motor connection

An expert electrician must always carry out the electrical connection. Compare the power supply with the data plate specifications and then choose a suitable connection. The type of connection is stated on the motor data plate and can be Y (star) or D (Delta), according to the power supply of the motor (see figure below).

Follow the connection standard used in the plant. In no case connect the electrical motor directly to supply network but use a suitable electric switchboard equipped with a knife switch and suitable safety devices (e.g. motor breaker switches) in the power circuit. Safety devices against overloads must also protect the motors. Make sure that the motor has suitable grounding and that it has been connected properly.

1. INSTALLATION

1.12. Motor standard

As a standard Tapflo CTX pump are equipped with motors of the following parameters:

- International Mounting Arrangement – **B35**
- Number of poles / Rotation speed [rpm] – **2**
- Protection grade – **IP55**
- Voltage – **3 phase**
- **PTC protection**

Motor power	IEC size	RPM	Voltage	Frequency
1.5 kW	90S	2920	Δ230 / Y400	50 Hz
		3500	Δ280 / Y480	60 Hz
2.2 kW	90L	2920	Δ230 / Y400	50 Hz
		3500	Δ280 / Y480	60 Hz
3.0 kW	100L	2910	Δ230 / Y400	50 Hz
		3500	Δ280 / Y480	60 Hz
4.0 kW	112M	2910	Δ400 / Y690	50 Hz
		3500	Δ480 / Y830	60 Hz
5.5 kW	132S	2930	Δ400 / Y690	50 Hz
		3500	Δ480 / Y830	60 Hz
7.5 kW	132S	2930	Δ400 / Y690	50 Hz
		3520	Δ480 / Y830	60 Hz
11 kW	160M	2950	Δ400 / Y690	50 Hz
		3540	Δ480 / Y830	60 Hz
15 kW	160M	2950	Δ400 / Y690	50 Hz
		3550	Δ480 / Y830	60 Hz
18.5 kW	160L	2960	Δ400 / Y690	50 Hz
		3550	Δ480 / Y830	60 Hz
22 kW	180M	2960	Δ400 / Y690	50 Hz
		3550	Δ480 / Y830	60 Hz
30 kW	200L	2970	Δ400 / Y690	50 Hz
		3550	Δ480 / Y830	60 Hz
37 kW	200L	2970	Δ400 / Y690	50 Hz
		3560	Δ480 / Y830	60 Hz
45 kW	225M	2970	Δ400 / Y690	50 Hz
		3580	Δ480 / Y830	60 Hz

2. OPERATION

2. OPERATION

2.1. Start-up

- Check manually that the motor is free to turn, moving the motor cooling fan.
- Make sure that the piping is not clogged and is free from residues or foreign objects. Make sure that the liquid flows regularly into the pump.
-  ➤ The pump and piping connected to it, at least the suction pipe, must be full of liquid. Any air or gas must be carefully released. In case of suction with negative head, fill the suction piping and check how the bottom valve works. It must guarantee that the liquid must not flow back, therefore emptying the suction pipe with consequent disconnection of the pump.
-  ➤ The suction shut-off valve (if any) must be completely open.
-  ➤ The shut-off / regulation valve on the discharge side must be 75% closed.
-  ➤ The motor must turn in the same direction as the arrow shown on the pump. The direction of rotation is always clockwise looking at the pump from the motor side; check by starting briefly, then looking at the direction of rotation of the motor fan through the fan lid. If it is wrong, the motor must be stopped immediately. Change the connection to the terminals of the electric motor (chapter 1.11 "Motor connection") and repeat the procedure described above.
-  ➤ Any auxiliary connections must all be connected.

2.1.1. Starting the pump

The CTX pump must be started with almost closed discharge valve. Start the electric motor and open the discharge shut-off / regulation valve gradually until the desired output has been reached. The pump must not run more than two or three minutes with closed discharge. Longer operation in these conditions can seriously damage the pump.

If the pressure shown on the pressure gauge on the discharge piping does not increase, turn off the pump immediately and release pressure carefully. Repeat the connection procedure.

If there are changes of flow rate, head, density, temperature or viscosity of the liquid, stop the pump and get in touch with our technical service.

2.1.2. Restarting after power shut-off

In case of accidental stopping, make sure that the non-return valve has prevented backflow and check that the motor cooling fan has stopped. Start the pump again following the instructions of chapter 2.1.1 "Starting the pump".

If the pump intakes from a lower level than it is positioned, it can un-prime during the standstill and therefore you must check again before starting that the pump and the suction piping are full of liquid.

2. OPERATION

2.2. Stopping the pump

It is advisable to close the discharge shut-off / regulation valve gradually and stop the motor immediately after. The reverse sequence is not recommendable, especially with larger pumps or longer delivery piping. That is to avoid any problems due to water hammering. If a suction shutoff valve has been installed, it is advisable to close it completely after pump is fully stopped.

2.3. Cleaning and disinfection

Cleaning and disinfection of the pump system is of greatest importance when the pump is used in a food processing installation. Use of a pump system that is NOT cleaned or disinfected can cause contamination of the product. The cleaning cycles as well as chemicals to use for the cleaning vary depending on the pumped product and the process. The user is responsible to establish a suitable cleaning and / or disinfection program according to local and public health and safety regulations.

2.3.1. Cleaning procedure

The pump may be cleaned in two different ways:

CIP (Cleaning In Place)

without dismantling the pump, using steam, water or cleaning chemicals. Follow these safety instructions during the CIP procedure:

- Make sure that all cleaning line connections are properly tightened to avoid splashing of hot water or cleaning chemicals.
- When using an automatic process, a safety device should be installed to avoid unintentional automatic start-up of the pump.
- Before any disassembly of the pump, fittings or pipes, make sure that the cleaning cycle is finished.

Manual cleaning

by simply dismantling the pump casing, impeller and mechanical seal. Always follow these safety instructions:

- Switch off the electric power to the motor and disconnect the motor starting system if installed.
- The cleaning personnel shall wear suitable protective clothing, footwear and goggles.
- Use a suitable non-toxic and non-flammable cleaning solution.
- Always keep the area around the pump clean and dry.
- Never clean the pump by hand with pump running.

2. OPERATION

2.4. Residual risks

Even with proper application and observance of all points listed in this operating manual, there is still an estimable and unexpected residual risk when using the pumps. It may leak, fail due to wear, application-related causes or system-related circumstances.

2.5. Disposal after expiration of the expected lifetime

The metallic components like stainless steel can be recycled. Plastic parts are not recyclable and must be disposed of as residual waste. The pump must be disposed of properly, according to local regulations. It should be noted that potentially dangerous fluid residues may remain in the pump and can create a hazard to the operator or the environment, therefore the pump has to thoroughly cleaned before disposal.

2.6. Waste of electrical and electronic equipment (WEEE) directive

Users of electrical and electronic equipment (EEE) with the WEEE marking per Annex IV of the WEEE Directive must not dispose of end of life EEE as unsorted municipal waste, but use the collection framework available to them for the return, recycle, recovery of WEEE and minimize any potential effects of EEE on the environment and human health due to the presence of hazardous substances. The WEEE marking applies only to countries within the European Union (EU) and Norway. Appliances are labelled in accordance with European Directive 2002/96/EC. Contact your local waste recovery agency for a designated collection facility in your area.

2.7. Actions in emergency

In the event of a leak during fluid transfer, the air supply have to be closed and the pressure released. During spillage of an aggressive liquid, local and national safety rules must be followed.

3. MAINTENANCE

3. MAINTENANCE

Maintenance work on electrical installations must be performed by qualified personnel and only when the power supply has been shut off. Follow the local and national safety regulations.

Pumps installed in ATEX zone, must be serviced outside of the zone. Dismantling and servicing pump in ATEX zone is strictly prohibited.

3.1. Inspections

- Periodically check suction and discharge pressures.
- Inspect the motor according to the instructions from the motor manufacturer.
- In general, a mechanical seal does not require maintenance, but the pump should never run when empty (dry). If a leakage occurs, replace the mechanical seal.
- Establish a preventive maintenance schedule based on the pump's service history.

3.2. Location of faults

Overheating of motor	Insufficient flow rate or pressure in pump	No pressure on the	Irregular discharge flow / pressure	Noise and vibrations	The pump gets clogged	Overheating of the	Abnormal wear	Leak in mechanical seal	Possible reason	Solution
	X		X						Wrong direction of rotation	Invert the direction of rotation
	X	X	X	X					Insufficient suction head (NPSH)	Increase available NPSH: <ul style="list-style-type: none"> ➤ Raise the suction reservoir ➤ Lower the pump ➤ Increase the pressure in the suction tank ➤ Reduce the vapour pressure ➤ Increase the diameter of the suction pipe ➤ Make suction pipe short and direct
		X							Pump is clogged	Clean the pump
	X		X	X				X	Cavitation	Increase suction pressure
	X		X	X				X	The pump sucks air	Make sure all connections are tight
		X	X	X					Suction pipe is blocked	Check pipes / valves and filters on the suction line
	X			X					Discharge pressure too high	Reduce the head by increasing pipe diameter and/or reduce number of valves and bends
X				X		X			Flow rate too high	Reduce the flow: <ul style="list-style-type: none"> ➤ Partially close the discharge valve ➤ Reduce the impeller diameter (contact us) ➤ Reduce the rotation speed
	X			X	X	X	X		Liquid temperature too high	Cool the liquid
								X	Broken or worn mechanical seal	Replace the seal
								X	Wrong material of O-rings for the liquid	Mount O-rings in other material (contact us)
X				X	X	X			The impeller scratches	Reduce the temperature and / or suction pressure. Adjust clearance between housing and impeller
				X			X		Loads on the pipes	Connect the pipes independent of the pump
				X	X	X	X		Foreign objects in the liquid	Use a filter on the suction side
								X	Spring tension too low on mechanical seal	Adjust as mentioned in this manual
		X							Shut-off valve closed on suction side	Check and open the valve
	X								Discharge pressure too low	Increase the pressure – install an impeller with a bigger diameter (contact us)
					X	X			Pump is not filled with liquid	Fill pump with liquid
X	X			X					Liquid parameters different than calculated	Check pumped liquid parameters

3. MAINTENANCE

3.3. Disassembly of the pump

The disassembly should be performed only by qualified personnel.

Each operation to be fulfilled with the machine must always be carried out once all the electrical contacts have been disconnected. The pump-motor unit must be placed in a position where it cannot be started unintentionally.

Before servicing in any way the parts that come in contact with the pumped liquid, make sure that the pump has been fully emptied and washed. When draining the liquid, make sure that there is no danger for people or the environment.

The numbers put in brackets, refer to the part numbers in the spare part drawings and spare part lists in chapter 5. "Spare parts".

3.4. Disassembly procedure – single mechanical seal

Fig. 3.3.1

Unscrew the shaft guard screws [411] fastening the shaft guards [41] to the lantern [11].

Fig. 3.3.2

Take off the shaft guards [41].

Fig. 3.3.3

Unscrew the casing mounting screws [141] and remove them with the nuts [143] and washers [142].

Fig. 3.3.4

Take off the pump casing [13].

3. MAINTENANCE

Fig 3.3.5

Remove the casing O-ring [18].

NOTE! After every disassembly the O-ring [18] should be replaced by a new one.

Fig 3.3.6

Use a bar to fix the shaft in place and unscrew the impeller nut [191] and remove the O-ring [192].

NOTE! Apply grease on the thread before re-assembly.

Fig 3.3.7

Unscrew the impeller [9...].

NOTE! Apply grease on the thread before re-assembly.

Fig 3.3.8

Remove the nuts [20] and washers [201] fastening the back casing [12] to the lantern [11].

Fig 3.3.9

Carefully remove the back casing [12]. The static part of the mechanical seal will remain in the back casing.

Fig 3.3.10

Remove the rotary parts of mechanical seal.

3. MAINTENANCE

Fig 3.3.11

Remove the circlip by means of pliers and push out the static part of the mechanical seal.

Fig 3.3.12

Remove the bolts [121], washers [122] and nuts [123] fastening the lantern [11] to the electric motor.

Fig 3.3.13

Remove the lantern [11].

Fig 3.3.14

Remove the mechanical seal grub screws.

Fig 3.3.15

Remove the remaining part of mechanical seal.

Fig 3.3.16

Remove the shaft screws [161].

3. MAINTENANCE

Fig 3.3.17

Remove the shaft [16].

The pump is now completely disassembled. Check all components, especially the mechanical seal, for wear or damage and replace if necessary. The casing O-ring should be replaced after every pump disassembly!

3.5. Assembly of the pump – single mechanical seal

The assembly procedure is done in the reverse order to the disassembly.

Nevertheless there are a few things that you have to remember in order to assemble the pump correctly.

Fig. 3.4.1

Degrease the motor shaft and pump shaft before assembly.

Fig. 3.4.2

Align key groove with shaft hole.

3. MAINTENANCE

Fig. 3.4.3

Precisely clean and degrease with alcohol the internal rim of the back casing [12] as well as the shaft [16] surface. Check if the rim surface is smooth. If not it may cause mechanical seal leakage.

NOTE! For cleaning use dust-free material e.g. blue towel TORK 1230081.

Fig. 3.4.4

Before assembly lubricate the mechanical seal O-rings to provide more accurate assembly as well as prevent the O-ring from curling.

Fig. 3.4.5

Before final assembly, once again degrease the sliding faces of the mechanical seal.

Fig. 3.4.6

Adjust retainer pin with rotary seal part groove.

3. MAINTENANCE

Fig. 3.4.7

Install back casing, impeller, insert spacer ring tool [13-MT]. Install casing, screw every second casing mounting screws nuts and washers.

Fig. 3.4.8

Proper gap between the impeller and the back casing has to be set (see table on page 25). Push the impeller to the housing through the shaft, then tighten the shaft screws.

Fig. 3.4.9

Remove casing and spacer ring tool [13-MT]. Install casing O-Ring, lubricate it and install back casing with all screws.

Fig. 3.4.10

By using a feeler gauge [15-MT] set the appropriate gap (**B**) between retainer and rotary seal part to ensure proper mechanical seal spring tension – see *below table*.

3. MAINTENANCE

After installation of the impeller, proper gap "A" between the impeller and the front casing has to be set (Fig. 3.4.7 – 3.4.9). Loosen the shaft screws [161] and using the spacer ring tool set the proper gap (A). Using the feeler (gap) gauge set the appropriate gap (B) between the retainer and the rotary seal part to adjust initial tension of the mechanical seal spring (Fig. 3.4.10).

The spacer ring tool is supplied with every CTX pump and the feeler gauge is supplied with every CTX pump and with every spare mechanical seal. The special tools can also be purchased separately by using the below part codes.

NOTE! Setting the gap must be done outside of the ATEX zone.

Pump type	A [mm]	B [mm]	Spacer ring tool	Feeler gauge
CTX 40-165	0.5	1.2	14-145-13-MT	14-175-15-MT
CTX 50-145			14-175-13-MT	
CTX 50-200				
CTX 65-175				
CTX 65-240	1.0	3	14-240-13-MT	14-231-15-MT
CTX 65-230			14-212-13-MT	
CTX 80-205				
CTX 80-212				
CTX 80-260				
CTX 100-230			14-231-13-MT	

3. MAINTENANCE

3.6. Disassembly of the pump – double mechanical seal

Fig. 3.5.1

Unscrew the shaft guard screws [411] fastening the shaft guards [41] to the lantern [11].

Fig. 3.5.2

Take off the shaft guards [41].

Fig. 3.5.3

Unscrew the casing mounting screws [141] and remove them with the nuts [143] and washers [142].

Fig. 3.5.4

Take off the pump casing [13].

Fig 3.5.5

Remove the casing O-ring [18].

NOTE! After every disassembly the O-ring [18] should be replaced by a new one.

Fig 3.5.6

Use a bar to fix the shaft in place and unscrew the impeller nut [191] and remove the O-ring [192].

NOTE! Apply grease on the thread before re-assembly.

3. MAINTENANCE

Fig 3.5.7

Unscrew the impeller [9...].

NOTE! Apply grease on the thread before re-assembly.

Fig 3.5.8

Remove the push-in fittings [1202].

Fig 3.5.9

Remove the nuts [20] and washers [201] fastening the back casing [12] to the lantern [11].

Fig 3.5.10

Remove the back casing with all parts of mechanical seal.

Fig 3.3.11

Remove the double mechanical seal chamber [120] and holding bolts [1204].

Fig 3.3.12

Remove the circlip by means of pliers and push out the static part of the mechanical seal.

3. MAINTENANCE

Fig 3.5.13

Loose the shaft screws [161].

Fig 3.5.14

Remove the shaft [16].

Fig 3.5.15

Remove the bolts [121], washers [122] and nuts [123] fastening the lantern [11] to the electric motor.

Fig 3.5.16

Remove the lantern [11].

The pump is now completely disassembled. Check all components, especially the mechanical seal, for wear or damage and replace if necessary. The casing O-ring should be replaced after every pump disassembly!

3. MAINTENANCE

3.7. Assembly of the pump – double mechanical seal

The assembly procedure is done in the reverse order to the disassembly.

Nevertheless there are a few things that you have to remember in order to assemble the pump correctly.

Fig. 3.6.1a

Assemble complete pump, without O-Rings, Impeller nut and any part of mechanical seal, except distance ring's sleeve. Insert spacer ring tool [13-MT] between Impeller and pump casing (see 3.4.7).

For this step every second screw of casing is enough.

Proper gap between the impeller and the back casing has to be set. Push the impeller to the housing through the shaft, then tighten the shaft screws.

Fig. 3.6.1a

Distance ring's sleeve [1203] has direction on pump sizes:

CTX 80-205

CTX 80-212

CTX 65-230

CTX 65-240

CTX 65-240

CTX 100-230

Fig. 3.6.2

Take off Pump casing [13], Back casing [12], impeller [9...] and distance ring's sleeve [1203]. Remove spacer ring tool [13-MT].

Equip pump with all required parts and assemble again.

Picture shows proper sequence of double mechanical seal parts.

Fig. 3.6.3

Take extra care for adjustment of distance ring's sleeve pins with rotary seal parts groove.

After assembly, the spacer ring should be able to move slightly forward and backward, but not rotate.

3. MAINTENANCE

3.7.1. Test run

We recommend you to conduct a test run of the pump before installing it in the system, so no liquid gets wasted if the pump leaks or perhaps does not start accordingly to wrong assembly of the pump.

After a few weeks of operation retighten the screws with appropriate torque.

4. OPTIONS

4. OPTIONS

4.1. Motor shroud – M/N

An optional motor shroud is available. It is made of stainless steel and provides easy cleaning and splash protection for the electrical motor. As a standard, the pump with the shroud is equipped with feet (M) or bracket (N). Material execution of the shroud is AISI 304 stainless steel.

Available for all pump sizes

Code	Motor IEC size	Motor powers	Pump size
KIT SHROUD 90 [M/N]	90S / 90L	1.5 kW, 2.2 kW	40-165, 50-145
KIT SHROUD 100 [M/N]	100L	3.0 kW	40-165, 50-145, 65-175
KIT SHROUD 112 [M/N]	112M	4.0 kW	65-175
KIT SHROUD 132 [M/N]	132S	5.5 kW, 7.5 kW	50-200, 65-175, 65-230
KIT SHROUD 160 [M/N]	160M / 160L	11kW, 15 kW, 18.5 kW	50-200, 65-xxx, 80-xxx, 100-230
KIT SHROUD 180 [M/N]	180M	22 kW	65-240, 80-xxx, 100-230
KIT SHROUD 200 [M/N]	200L	30 kW, 37 kW	80-260, 100-230
KIT SHROUD 225 [M/N]	225M	45 kW	80-260, 100-230

4. OPTIONS

4.2. Double mechanical seal – 2D

This option is utilized in cases of liquids with high abrasive solids content, aggressive or polymerizing liquids. It allows easy leakage control. Utilizes pressurized quench liquid. Available with SiC/Carbon seal faces at atmospheric side and SiC/SiC and SiC/Carbon on liquid side.

Flushed seal connection thread is 1/8" G. As a standard pump is equipped with push in fitting connectors for 6mm hoses. The required flow quantity amounts to 15–30 l/h normally at atmospheric pressure (maximum permissible pressure 5 bar). The hose connection should always be positioned vertically with the fluid inlet below and the outlet above.

4. OPTIONS

4.3. Self-priming pump - CTXS

The self-priming feature allows to use the pump in applications where suction lift is required. Since a standard CTX pump is not capable of generating suction lift, by modifying the pump we can achieve 5 m of suction lift. For performance and suction curves, please see chapter 6.5. "Performance curves".

NOTE! The self-priming version is **NOT** ATEX approved.

For the pump to achieve the self-priming capability, it has to be pre-filled with liquid before start-up. Below, the priming volumes for each pump size:

- CTXS 50-145 – 1.5 liter
- CTXS 65-175 – 2.5 liters
- CTXS 80-212 – 6.5 liters

After the initial filling, the return pipe will recirculate the liquid from the discharge side of the pump to ensure the liquid ring inside the pump is maintained. In order to ensure proper volume of liquid remains inside the pump after shut down, the below installation of the pump is recommended. The minimum height of the discharge pipeline (H_{\min}) and pipe diameter are as follows:

Pump size	H_{\min}	Max suction with water	Pipe diameter
CTXS 50-145	1.1 meter	5 m	2"
CTXS 65-175	1.8 meter	5 m	2"
CTXS 80-212	1.8 meter	5 m	2 1/2"

4. OPTIONS

Additional / non-standard parts:

Code	Q-ty	Description	Material
13S	1	Pump casing for CTXS pump	AISI 316L
14S	1	Front cover for CTXS pump	AISI 316L
141S	1	Front cover clamp	AISI 304L
18S	1	Front cover O-ring	EPDM, NBR, FKM
70	1	Air screw	AISI 316L
701	1	Impeller grub screw	A2
71	1	Return pipe	AISI 316L
711	2	Return pipe clamp	AISI 304L
712	2	Return pipe gasket	EPDM, PTFE
90S	1	Impeller for CTXS pump	AISI 316L

4. OPTIONS

4.4. Inducer – 4L

In applications where NPSHa is a critical parameter, an inducer can be used. The inducer increases inlet pressure thus lowering the NPSHr of the pump. Depending on the pump size and duty point, the NPSHr is reduced by 30 to 50%. This option is very easy to accommodate even in existing pump as only the inducer has to be screwed onto the impeller. Note, that with this option the suction connection size and suction pipeline should be kept of minimum diameter as the standard pump inlet connection size.

Additional / non-standard parts:

Code	Pump	Q-ty	Description	Material
14-165H-60	CTX 40-165	1	Inducer	AISI 316L
14-145H-60	CTX 50-145	1	Inducer	AISI 316L
14-200H-60	CTX 50-200	1	Inducer	AISI 316L
14-175H-60	CTX 65-175	1	Inducer	AISI 316L
14-240H-60	CTX 65-230; CTX 65-240	1	Inducer	AISI 316L
14-260H-60	CTX 80-205; CTX 80-212; CTX 80-260	1	Inducer	AISI 316L
14-231H-60	CTX 100-230	1	Inducer	AISI 316L

*** Parts indicated as [H/N] have different execution for CTX I and CTX H pumps. When ordering spare parts please indicate if the part is for Industrial or Hygienic series e.g. 14-145**N**-11 or 14-145**H**-11.

5. SPARE PARTS

5.3. Recommended spare parts

Normally the CTX pump is maintenance free. However, depending on the nature of the liquid and temperature etc. some parts of the pump are subject to wear and need to be replaced. We recommend having the following parts in stock:

Pos.	Description	Q-ty
15	Mechanical seal	1
18	Casing O-ring	1
192	Impeller nut O-ring	1

5.4. How to order parts

When ordering spare parts for Tapflo pumps, please let us know what is the **model number** and **serial number** from the pump's name plate. Then just indicate the part numbers from the spare parts list and quantity of each item.

6. DATA

6. DATA

6.1. Pump code

The model number on the pump and on the front page of this instruction manual tells the pump size and materials of the pump.

- I. CTX = Tapflo CTX centrifugal pump**
CTXS = Tapflo CTX self-priming pump

- II. Pump execution:**
 I = Industrial
 H = Hygienic

- III. Pump size (inlet DN – max impeller diameter [mm]):**
 40-165
 50-145
 50-200
 65-175
 65-230
 65-240
 80-205
 80-212
 80-260
 100-230

- IV. Actual impeller diameter [mm] used in pump**
 Trimming by 5 mm allowed

	Max.	Min.
100-230	230	170
80-260	260	195
80-212	212	160
80-205	205	155
65-240	240	190
65-230	230	170
65-175	175	130
50-200	200	160
50-145	145	115
40-165	165	120

V. Pump options:

1. Mechanical seal (FDA as standard):
 Blank* = SiC/carbon/EPDM
 SSS = SiC/SiC/Silicone
 SSE = SiC/SiC/EPDM
 SSV = SiC/SiC/FKM
 SSN = SiC/SiC/NBR
 SGV = SiC/graphite/FKM
 SGS = SiC/graphite/Silicone
 SGN = SiC/graphite/NBR

2. Type of mechanical seal

- Blank* = Single mechanical seal
 D = Double mechanical seal – back-to-back

3. Connection options

- Blank* = EN 1092-1 flange on CTX I
 Thread DIN 11851 on CTX H
 A = ANSI flange (CTX I only)
 B = BSPT female thread (CTX I only)
 C = SMS 3017 clamp (CTX H only)
 T = Clamp DIN 32676 (CTX H only)
 S = Thread SMS 1145 (CTX H only)
 R = Thread RJT (CTX H only)
 P = ISO 1127 clamp (CTX H only)
 W = No connection – plain weld end
 Z = Camlock male connection (CTX I only)

4. Special executions

- P05 = Extra polishing to Ra<0.5 (CTX H only)
 L = Pump with Inducer (low NPSHr)

VI. Motor power / IEC motor size

2900 rpm motors (2-pole):

- 15 = 1.5 kW / 90S
 22 = 2.2 kW / 90L
 30 = 3.0 kW / 100L
 40 = 4.0 kW / 112M
 55 = 5.5 kW / 132S
 75 = 7.5 kW / 132S
 110 = 11 kW / 160M
 150 = 15 kW / 160M
 185 = 18.5 kW / 160L
 220 = 22 kW / 180M
 300 = 30 kW / 200L
 370 = 37 kW / 200L
 450 = 45 kW / 225M

VII. Motor options

- M = Motor shroud with hygienic feet
 N = Motor shroud with mounting bracket
 V...F... = Motor for special voltage, frequency
 C = External cooling for motor
 UL = UL/CSA certified motor
 IP.. = IP class for motor
 D = Built on frequency inverter

* = standard execution

6. DATA

6.2. Dimensions - CTX

Dimensions in mm (where other is not indicated)

General dimensions only, ask us for detailed drawings. Changes reserved without notice.

7. WARRANTY

7. WARRANTY

7.1. Returning parts

When returning parts to Tapflo please follow this procedure:

- Consult Tapflo for shipping instructions.
- Cleanse or neutralize and rinse the part/pump. Make sure the part/pump is completely empty from liquid.
- Pack the return articles carefully to prevent any damage during transportation.

Goods will not be accepted unless the above procedure has been complied with.

7.2. Warranty

Tapflo warrants products under conditions as stated below for a period of not more than 12 months from installation and not more than 24 months from date of manufacturing.

1. The following terms and conditions apply to the sale of machinery, components and related services and products, of Tapflo (hereinafter "the products").
2. Tapflo (the manufacturer) warrants that:
 - a. its products are free of defects in material, design and workmanship at the time of original purchase;
 - b. its products will function in accordance with Tapflo operative manuals; Tapflo does not guarantee that the product will meet the precise needs of the Customer except for those purposes set out in any invitation to render documents or other documents specifically made available to Tapflo before entering into this agreement;
 - c. high quality materials are used in the construction of the pumps and that machining and assembly are carried out to the highest standards.

Except as expressly stated above, Tapflo makes no warranties, express or implied, concerning the products, including all warranties of fitness for a particular purpose.

3. This warranty shall not be applicable in circumstances other than defects in material, design and workmanship. In particular warranty shall not cover the following:
 - a. Periodic checks, maintenance, repair and replacement of parts due to normal wear and tear (seals, O-rings, rubber items, bushings, etc.);
 - b. Damage to the product resulting from:
 - b.1. Tampering with, abuse or misuse, including but not limited to failure to use the product for its normal purposes as stated at the time of purchase or in accordance with Tapflo instructions for use and maintenance of the product, or the installation or improper ventilation or use of the product in a manner inconsistent with the technical or safety standard in force;
 - b.2. Repairs performed by non-skilled personnel or use of non-original Tapflo parts;

7. WARRANTY

b.3. Accidents or any cause beyond the control of Tapflo, including but not limited to lightning, water, fire, earthquake and public disturbances etc.;

4. The warrantee shall cover the replacement or repairing of any parts, which is documented faulty due to construction or assembling, with new or repaired parts free of charges delivered by Tapflo. Parts subjected to normal tear and wear shall not be covered by the warranty. Tapflo shall decide as to whether the defective or faulty part shall be replaced or repaired.
5. The warrantee of the products shall be valid for a period in accordance to the current law from the date of delivery, under the condition that notice of the alleged defect to the products or parts thereof be given to Tapflo in written within the mandatory term of 8 days from the discovery. Repair or replacement under the terms of this warranty shall not give a right to an extension to or a new commencement of the period of warranty.
6. Repair or replacement under the terms of this warranty shall not give a right to an extension to, or a new commencement of, the period of warranty. Repair or replacement under the terms of this warranty may be fulfilled with functionally equivalent reconditioned units. Tapflo qualified personnel shall be solely entitled to carry out repair or replacement of faulty parts after careful examination of the pump. Replaced faulty parts or components will become the property of Tapflo.
7. The products are built in accordance with standard CE normative and are tested (where applicable) by Tapflo. Approval and tests by other control authority are for the customer's account. The products shall not be considered defective in materials, design or workmanship if they need to be adapted, changed or adjusted to conform to national or local technical or safety standards in force in any country other than that for which the unit was originally designed and manufactured. This warranty shall not reimburse such adaptations, changes or adjustments, or attempt to do so, whether properly performed or not, nor any damage resulting from them, nor any adaptation change or adjustments to upgrade the products from their normal purpose as described in the products operative manual without the prior written consent of Tapflo.
8. Installation, including electric and other connections to utility mains according to Tapflo drawings, is for the cost and responsibility of the customer, unless otherwise agreed in writing.
9. Tapflo will not be liable on any claim, whether in contract, tort, or otherwise, for any indirect, special, incidental or consequential damages caused to the customer or to third parties, including loss of profits arising by any possible infringement of par. 3 above or by the customer or third parties being in the impossibility of using the products.

Steady the above, Tapflo liability to the customer or third parties from any claim, whether in contract, tort or otherwise, shall be limited to the total amount paid by the customer for the product that caused the damages.
